APPLIED BUSINESS AND TECHNICAL SOLUTIONS

Suncode has delivered and implemented the Plus Workflow system for business process management at Gerresheimer Bolesławiec company. The scope of the implementation included the process of electronic invoice flow along with the integration with SAP system. The main purpose of the project was to reduce the operational costs and to streamline the company operation. The Plus Workflow is used in order to manage the cost obligations, which is possible thanks to the integration of the system with SAP in terms of data downloading and automatic accounting of the documents, with reference to multiple accountant dimensions and business units. The project has also included the implementation of an interface to the SAP system in terms of matching invoices with order and downloading basing data concerning both contractors and posted documents. Due to the FI module, it is possible to fully account invoices, without the order pinned in SAP.

The mechanism of cost-sharing and accounting, which has been developed and implemented in three economic divisions, allows the system to be used in various factories and company areas. Monthly, in Plus Workflow there are processed over a thousand invoices and administrative documents. Moreover, thanks to the training, the system's users, administrators and scanning station operators acquired knowledge enabling them to full exploitation of the functionalities of the Plus Workflow system.

From the very beginning, the cooperation with Gerresheimer company was characterized by big engagement and professional approach of the project team. Now, our partnership develops and both sides are content .

Patryk Pozorski, Business Account Manager.

The cooperation at high technical and substantive levels resulted in the successful launching of the system and the satisfaction of both sides. Moreover, the established collaboration ensures cost reduction, cost commitments process facilitation, and manual work reduction.

The implementation of the Plus Workflow system was conducted in accordance with our technical and business objectives regarding the business process facilitation. Suncode's services are highly advanced both in terms of technical aspect and substantial one.

Karolina Witkowska, IT Project Manager
